SUMMARY

Aspiring AI Engineer with hands-on experience in machine learning, intelligent systems, and AI-powered applications. Skilled in Python, Scikit-learn, SQL, and data-driven solution development, with experience building recommendation systems, and IoT-based intelligent platforms. Currently focused on Generative AI, Large Language Models (LLMs), (RAG), AI Agents, Tool Calling, and Conversational AI to develop real-world intelligent automation solutions.

TECHNICAL SKILLS

Programming Languages :

Python , JavaScript , SQL

Web Technologies :

HTML , CSS , React.js , Next.js , Node.js , Flask

AI & Agentic AI :

Scikit - Learn , LangChain , LangGraph , ChromaDB , RAG

Tools :

Git , GitHub , Postman , VS Code

PROFESSIONAL EXPERIENCE

Alt Digital Technologies , Sirsi

June 2025 - August 2025

Software Developer Intern

- Developed responsive and reusable user interface components using React.js and JavaScript.
 - Collaborated with developers to implement frontend features and integrate backend APIs.
 - Participated in software testing, troubleshooting, and deployment activities.
-

PROJECTS

NextStep AI - Career Guidance System

Tech Stack: Next.js, TypeScript, Flask, MongoDB

- Developed an AI-powered career guidance platform that recommends suitable career paths based on students' academic backgrounds and interests.
- Built a responsive frontend using Next.js and TypeScript and integrated Flask-based backend APIs for recommendation processing.

IoT-Enabled Smart Energy Monitoring and NILM-Based Appliance Disaggregation

Tech Stack: Python, Scikit-learn, Flask, React.js, ESP32, MongoDB/MySQL

- Developed an AI and IoT-based smart energy monitoring system for real-time appliance-level energy consumption analysis.
- Implemented Non-Intrusive Load Monitoring (NILM) using machine learning models to identify and classify appliance usage patterns.

Automated Stocks Trading System Using Machine Learning

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Flask, Upstox API

- Developed a machine learning-based stock trading system that analyzes historical market data to generate buy/sell signals and trading recommendations.
 - Implemented data preprocessing, predictive modeling, and automated trade execution workflows using Python, Scikit-learn, and financial market APIs.
-

EDUCATION

JAIN (Deemed -To-Be) University , Bengaluru

MSc Computer Science & Information Technology

CGPA: 8.72

2024 - 2026

JSS College of Arts , Commerce & Science , Mysuru

BSc Electronics

CGPA: 9.0

2020 - 2023
